Summary

Senior Magento 2 / Adobe Commerce developer with **8+ years of hands-on Magento 1/2** and **12 years in PHP**. Currently **Backend Lead** on a multi-store Magento 2 platform for four Dutch B2B/B2C brands: custom modules, ERP integrations (Kerridge, NetSuite), performance, CI/CD and code review. **AI-driven development is how I work every day**: Claude Code is my main development environment, and I built **MagePilot**, my own multi-agent system on the **Claude Agent SDK** that takes Magento tickets from Jira to a tested branch inside local **markshust/docker-magento** stacks: investigation, design, code, tests and browser QA, with guardrails and human review. I automate the routine around Magento work (local environments, estimates, QA, security audits) so I can move fast without losing quality. Deep third-party and payment integration experience: NMI gateway built from scratch, HeidelPay, Stripe, Salesforce, Mindbox, Algolia. English — B2, daily working language.

Core Competencies

- **Magento 2 backend** — custom modules, plugins, observers, service contracts, repositories, indexers, cron, message queues, REST / SOAP / GraphQL APIs, multi-website & multi-store, B2B pricing
- **Integrations** — ERP / CRM (Kerridge, NetSuite, Salesforce, Mindbox), payments (NMI, HeidelPay, Stripe), search (Elasticsearch, Algolia); retries, idempotency, reconciliation
- **AI-driven development** — Claude Code custom agents, skills, hooks and MCP tools; my own multi-agent pipeline for Magento tickets; every AI change reviewed and tested before it ships
- **Workflow automation** — Jira-to-branch automation, parallel Docker stacks, AI estimates, automated browser QA on staging, AI-assisted security audits
- **Performance** — MySQL query and index tuning, Redis, Varnish full page cache, indexers on large catalogs (250,000+ records)
- **Technical leadership** — architecture decisions, code review standards, release process, onboarding

Technical Skills

Magento & E-commerce: Magento 2 / Adobe Commerce (2.3–2.4.8), Adobe Commerce Cloud, Magento 1, custom modules, checkout & payment customisation, custom product types, UI components, Hyvä (Alpine.js, Tailwind), Luma, Knockout.js, Magento 1 → 2 migration, version upgrades

Languages: PHP 8.x (5.6–8.3), SQL, JavaScript (ES6+), TypeScript, Python 3, Bash

AI & Automation: Claude Code (custom agents, subagents, skills, hooks, MCP servers), Claude Agent SDK, Playwright MCP, OpenAI / Anthropic APIs with tool calling, Cursor, GitHub Copilot, n8n, LangChain, Ollama

APIs & Integrations: REST, SOAP, GraphQL, OAuth 2.0, JWT, webhooks · NetSuite, Kerridge, Salesforce, Mindbox · NMI, HeidelPay, Stripe · Algolia, Elasticsearch

Databases & Caching: MySQL / MariaDB (EXPLAIN, indexing, N+1 elimination), PostgreSQL, Redis, Varnish, Elasticsearch / OpenSearch, RabbitMQ

DevOps & Tools: Docker, markshust/docker-magento, Docker Compose, GitHub Actions, GitLab CI, Jenkins, GrumPHP, Nginx, Linux, zero-downtime deployment, Jira

Testing & Quality: PHPUnit, Codeception, pytest, Playwright, static analysis, code review, PSR-12

Own Projects

MagePilot — AI multi-agent system that automates Magento development tasks (own project, 2026)

Python 3.12 · Claude Agent SDK · Claude Code · MCP · Playwright · markshust/docker-magento · asyncio · SQLite · FastAPI · Telegram Bot API · systemd

- Daemon that pulls my sprint tickets from **Jira** and runs each one through specialised **AI agents**: an investigator turns the ticket into a concrete task, an architect drafts a design for larger changes (approved by me in Telegram), a coder implements it on a new branch, and a **QA agent** verifies it with tests and a real browser through **Playwright MCP**, with screenshots
- Built around local **markshust/docker-magento** stacks: maps each Jira project to its Docker project, reuses a running stack or starts it, and can run a second Magento project **in parallel on shifted ports** (my own tool), so agents test on a real Magento instance; commits pass the project's **GrumPHP** checks inside the container
- **Staging acceptance check**: walks the ticket's acceptance criteria on staging in a headless browser like a customer; a JS guard blocks every admin write and order, and credentials are never visible to the agent
- **Guardrails first**: a hook blocks force-push, pushes to master, history rewrites, credential reads and Docker control; I review each branch and open the pull request myself
- Also an **estimator agent** (hours with and without AI, risks, questions for the client, a ready Jira comment), a Jira comment watcher, an MCP tool for agents to ask me questions (text or voice, transcribed locally with faster-whisper), a live kanban web UI and ~140 pytest tests; **used daily on real client tickets**

Claude Code toolkit for Magento work

Claude Code · custom agents · skills · hooks · Bash

- **Custom Magento agents** (architect, adversarial code reviewer, module, API, performance, Hyvä, upgrade specialists) that follow Magento rules: service contracts, DI, no ObjectManager, repositories
- **Parallel environments skill**: starts a second markshust/docker-magento project next to a running one with every port shifted, without changing the project
- **Security audit skill**: white-box review of custom modules plus black-box checks on local and staging environments, findings verified against the source code

Professional Experience

Hoofdfabriek — Netherlands (remote) — Nov 2023 – Present

Backend Lead / Magento Tech Lead

Backend, integration and architecture ownership for a **four-brand Magento 2 platform** (B2B and B2C).

- Own the integration with **Kerridge Wholesale, a legacy ERP**: cron-driven **delta sync** of products, tiered B2B pricing, stock and customers, plus **full catalog imports of up to 250,000 records**
- Built the **NetSuite transactional integration** creating up to **2,000 orders and invoices per day**, with retry, idempotency and reconciliation across systems that fail independently
- Custom modules, plugins and observers, bug fixing and new features on a large, long-lived Magento codebase; **Magento 2.4.x upgrades** across several projects
- B2B **Hyvä** storefront work with Magento GraphQL (search, product sliders), Alpine.js and Tailwind
- **Database and caching optimisation**: Varnish, Redis, MySQL indexing, indexer tuning on large catalogs
- Own **CI/CD** on GitHub Actions: static analysis, automated tests, zero-downtime deployment
- Introduced **AI-assisted development** into daily work: Claude Code agents for ticket analysis, estimates, code, review and tests, and my own MagePilot pipeline for Jira tickets
- **Technical Lead on multiple projects**: architecture decisions, technical standards, code review, release process, onboarding

Stack: Magento 2 / Adobe Commerce · PHP 8.2 · MySQL · Redis · Varnish · Elasticsearch · Docker · GraphQL · REST · Hyvä · Kerridge · NetSuite · Claude Code

StartupSoft — Poland — Feb 2023 – Oct 2023

Senior Software Engineer

B-Stock (US), B2B liquidation auction marketplace on Magento.

- Custom PHP modules on a large legacy Magento codebase; **NetSuite ERP integration** (orders, customers, inventory)
- Auction services in **Node.js**, shipping and payment provider APIs, data-processing automation in **Python**

Stack: Magento · PHP · Node.js · Python · MySQL · REST API · NetSuite

InTechSoft · IdeaSoft.io · SSA Group — Kharkiv, Ukraine — Apr 2017 – Dec 2022

Magento Developer / Team Lead

Magento 1/2 and Adobe Commerce Cloud for clients in the **US, Australia, Germany and the EU**: Coco Republic (AU), Foundrae (US), Beaurepaires · Goodyear (AU), Lora DiCarlo (US), Mindbox · L'Oréal, ReviewClub (DE), Eurobrands (DE), Volmary (DE), GlobeWest (AU).

- Built a **multi-card NMI payment gateway from scratch** and led full-cycle delivery of the project, including mentoring
- Integrated **HeidelPay** and **Stripe**; customised payment and checkout modules across multiple storefronts
- **Salesforce CRM integration** (Magento 1 & 2) over SOAP and REST: orders, customers, products
- **NetSuite** integrations for customers, orders and payments; **Mindbox (L'Oréal)** REST integration with transaction and status-sync modules
- Bespoke **quote-and-pricing engine**, custom product types, delivery scheduling and admin grids; **REST APIs with OAuth 2.0** for a mobile client
- Performance on high-catalog stores: **Elasticsearch** and **Algolia** search, MySQL optimisation, image processing, store-locator indexing
- **Magento 1 → 2 migration**, XML import pipelines for products, categories and customers, 2FA, **Codeception** tests

Stack: Magento 2 / Adobe Commerce Cloud · Magento 1 · PHP 7.x · MySQL · Elasticsearch · Algolia · Knockout.js · REST · SOAP · OAuth 2.0

Independent Contract Work — Germany, EU, US — 2020 – 2025

Backend Engineer

- **Electronic Health Record platform** for ~20 clinics in Germany (Yii2, MySQL, Redis, Elasticsearch): GDPR-compliant role-based access, audit logging, lab system integrations
- **Laravel** services for carbon accounting, legal document workflow and a two-sided marketplace (queues, REST / OpenAPI, Docker)
- Earlier: **SEOBOOST** (Ukraine, 2013 – 2017), CMS Lead: e-commerce on Yii and AngularJS, OpenCart, WordPress

Education, Courses & Languages

MSc / BSc, Computer Networks and Telecommunications — Kharkiv National University of Radioelectronics (2013), Kharkiv College of ICT (2012)

Courses: Magento Developer (Spalah, 2016) · Python Pro (Hillel, 2024) · Computer Vision (Robot Dreams, 2023) · DevOps (Hillel, 2020)

Languages: English — B2 (Upper-Intermediate), daily working language · Ukrainian, Russian — native · Polish — A2
